PROFILE

Data Science postgraduate with hands-on experience in SQL, Python, Power BI, Excel, and MySQL for data analysis and business intelligence. Skilled in data cleaning, data wrangling, exploratory data analysis (EDA), statistical analysis, dashboard development, and machine learning using Pandas, NumPy, and Scikit-learn. Experienced in building predictive models and interactive dashboards to transform raw data into actionable business insights. Seeking a Data Analyst role to leverage analytical, visualization, and problem-solving skills to support data-driven decision-making.

SKILLS

Programming: Python, SQL
Data Analysis: Pandas, NumPy, Data Cleaning, Data Wrangling, EDA, Statistical Analysis
Visualization: Power BI, Microsoft Excel, Pivot Tables, Matplotlib, Seaborn
Databases: MySQL
Business Intelligence: Dashboard Development, KPI Reporting
Machine Learning: Scikit-learn, Regression, Classification, Clustering, Feature Engineering
Tools: Jupyter Notebook, Streamlit, LangChain, FAISS

PROJECTS

Online Payment Fraud Detection Using Machine Learning.
Technologies: Python, Pandas, Scikit-learn, Matplotlib

- Built and evaluated classification models including Logistic Regression, Decision Tree, and Random Forest on a transaction dataset containing over 50,000 records.
- Applied SMOTE to address class imbalance, improving fraud detection recall from approximately 62% to 89%.
- Achieved 96.2% model accuracy with a 0.90 F1-score and an AUC-ROC of 0.97 using the Random Forest model.
- Performed exploratory data analysis to identify important fraud indicators and improve feature selection.

AI-Powered Retrieval-Augmented Generation (RAG) Chatbot for PDF Document Analysis
Technologies: Python, Streamlit, LangChain, FAISS

- Developed a Retrieval-Augmented Generation (RAG) chatbot capable of processing PDF documents exceeding 200 pages.
- Built an end-to-end pipeline including PDF parsing, text chunking, embedding generation, and vector indexing.
- Enabled semantic search across 50+ documents with an average response time below 3 seconds.
- Reduced manual document search effort by approximately 70% through intelligent document retrieval.

Gold Price Forecasting Using Time Series Analysis and Machine Learning
Technologies: Python, Pandas, ARIMA, Matplotlib

- Developed a time-series forecasting model using more than 10 years of historical gold price data.
- Performed data preprocessing, trend analysis, and seasonal decomposition to improve forecasting accuracy.
- Achieved a Mean Absolute Percentage Error (MAPE) of approximately 4.5%, outperforming a baseline forecasting approach.
- Created visualizations to communicate historical trends and 30-day price forecasts effectively.

EDUCATION

Master of Science in Data Science 2024 – 2026
Vellore Institute of Technology, Vellore | CGPA: 8.09

Bachelor of Science in Computer Science 2021 – 2024
C. Abdul Hakeem College, Ranipet | CGPA: 8.0

CERTIFICATIONS

- Business Intelligence and Analytics — NPTEL [View Certificate]
